

substantially greater than that of the stem,

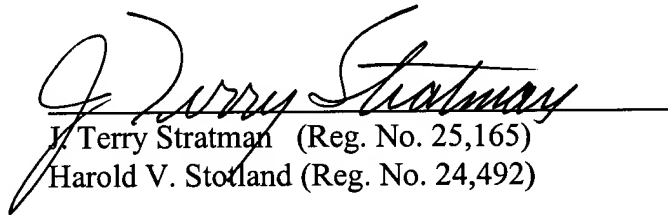

Q | a cap forming a top wall of the housing and extending transversely of the axis for closing the open top of the housing and [having] defining an enlarged opening therein for receiving the actuator member, and

a flexible and resilient member covering the [cap] actuator member and closing the opening [therein] while accommodating manual actuation of the actuator member from above the cap.

REMARKS

This amendment is for the purpose of clarifying the claim language and to better distinguish from the prior art.

Respectfully submitted,

J. Terry Stratman (Reg. No. 25,165)
Harold V. Stotland (Reg. No. 24,492)
